

The BigFoot Rendezvous is a gathering of researches and enthusiasts seeking answers on the mysterious subject of Sasquatch! We will have vendors, authors, artists, and the variety of artifacts and displays in addition to several speakers headlined by none other than:

Dr. Jeff Meldrum is a Full Professor of Anatomy & Anthropology at Idaho State University (since 1993). His research centers on the evolution of hominin bipedalism. His professional interest in the footprints attributed to sasquatch began when he personally examined a line of 15-inch tracks, in 1996. Over 25 years later, his lab houses well over 300 footprint casts attributed to relict hominoids around the world. He is author of *Sasquatch: Legend Meets Science* (Tom Doherty Publishers, 2006). He is editor-in-chief of the scholarly refereed journal, *The Relict Hominoid Inquiry* (www.isu.edu/rhi), now in its thirteenth year. Widely regarded as the leading authority on the subject of Bigfoot casts!

Marc Myrsell is a life long land surveyor in Oregon and Washington. Born in 1966, he became enamored with the quest of lost mysteries. While the re-discovery of the 1924 Ape Canyon Cabin is his claim to fame and infinite riches, he continues to venture in to the mildew and dust of shadowy paper archives in search of long forgotten stories; taking this evidence in to the field to look for physical evidence of historical monster attacks.

Michael Freeman is the son of the late research pioneer Paul Freeman and is an expert on his fathers evidence and legacy. He has studied the Blue Mountain evidence extensively and is the author of the upcoming book *The Freeman Bigfoot Files*.

Nico Spadafora is the owner and lead educator for The Fossil Team and lead researcher and manager at the North American Bigfoot Center. Nico has had a lifelong passion for all things furry, scaly, and feathery. Along with the study of paleontology, he's spent many hours working with big animals like lions, crocodiles, and elephants, and many hours out in the woods tracking wildlife and teaching survival skills.. Using his knowledge in paleontology, ecology, and zoology as well as his tracking skills, Nico has become a valuable asset to the research at the North American Bigfoot Center.

David Ellis Member of the Bigfoot Field Research Organization, BFRO since 2006, and has been an ongoing core member of the Olympic Project since 2010 where specializes in field research and audio analysis for the team.
